Django Rest Task

Car Rental System

Major functionalities / Features:

Customer

– Can create an account and register for renting of cars. Users can:

- Car Booking
- View Car booking history
- Update His/Her profile
- Update his/her password
- Logout

Admin

– Admin is the superuser of the website who can manage everything on the website. Admin can log in through the login page Admin can:

- Admin can create and manage vehicle
- Manage Booking(Edit ,delete)
- Admin Can delete the details of registered users
- Admin Dashboard
- Change Password
- Logout

Note:-

1.Create soft only delete while deleting a object.

2. Manage permissions accordingly,Like a customer should not be able to manage vehicle and booking.

3.Create REST API in django rest.

4.While Booking do not worry about payment.

5. Also admin functionality is not related to django-admin dashboard.
